

LEVEL UP BIT BY BIT WITH LEARN-A-BIT

As the name says, the purpose of Learn-a-bit is about learning one bit of code at a time. In these events, you will build small projects to educate yourself on the fundamentals of web development using HTML, CSS, and JavaScript. These events are relaxed and non-competitive, but are still challenging enough to push you to use all your resources and knowledge to solve each problem.

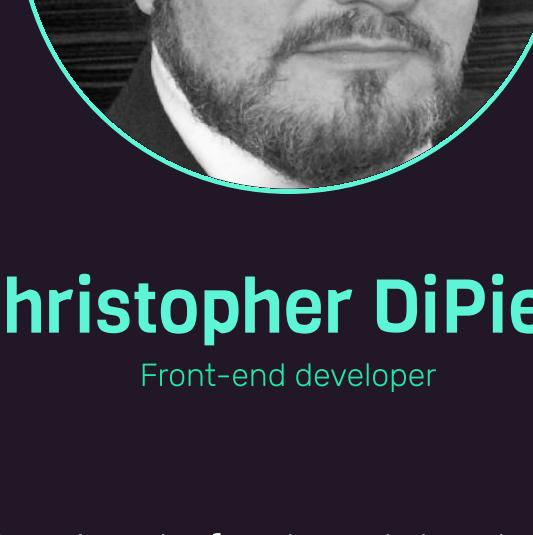

[JOIN A LEARN-A-TON](#)**WHAT IS IT ABOUT?****WHAT IS LEARN-A-BIT ABOUT ?**

Learn-a-bit will teach you the fundamentals through a hands-on approach. You will gain versatility in the basic tools of the trade and learn the best practices for writing semantic HTML and well-designed CSS. You will improve your design skills and start to create attractive and attention-grabbing portfolio pieces while also gaining confidence to tackle any of the harder hackathons.

In the end, the first impression and presentation of products are the main reason for its success and appeal. Our products represent ourselves and our knowledge so we should make it shine in the best light.

[JOIN A LEARN-A-TON](#)**TEAM****Emsad Ahmetasevic**
Front-end developer

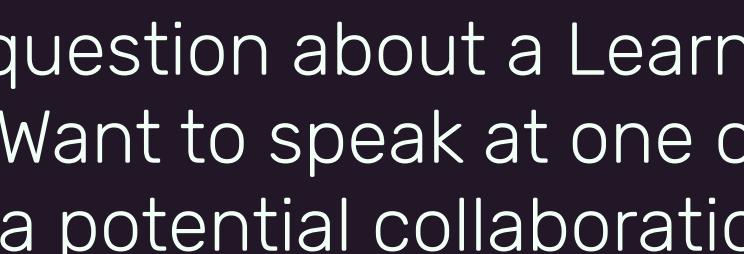

I am a positive, creative and fun person seeking more knowledge and opportunities to improve and show my best.

**Christopher DiPiero**
Front-end developer

Passionate front-end developer seeking new opportunities to grow and learn.

**Julio Alcantara**
Designer & Front End Developer

I'm friendly, love to learn new things and always try and keep an open mind. You never know what you might learn from others so its best to listen!

**CONTACT US**

Have a question about a Learn-a-bit or workshop? Want to speak at one of our events or discuss a potential collaboration? Contact us, we'd love to start a conversation.
